

# JUDE OYOVBAIRE

Senior / Staff DevOps & Platform Engineer

Amsterdam, Netherlands • [judeoyovbaire@gmail.com](mailto:judeoyovbaire@gmail.com) • [linkedin.com/in/judeoyovbaire](https://linkedin.com/in/judeoyovbaire) • [judaire.io](https://judaire.io)

## PROFESSIONAL SUMMARY

---

Staff-level Platform / DevOps Engineer with 10+ years designing and operating cloud-native infrastructure across GCP, AWS, and Azure for high-throughput, regulated systems - including fintech payment platforms and eCommerce platforms powering billions in revenue. Expert in Kubernetes at scale, Infrastructure-as-Code with Terraform, and GitOps-driven CI/CD. Proven technical leader: architected multi-tenant platforms, owned cross-team RFCs, led 5 DevOps transformations, and mentored 20+ engineers - achieving 99.99% platform availability, 40% faster delivery, and \$500K+ in annual savings. Active adopter and advocate of GenAI tooling (Claude Code, Cursor, MCP-driven workflows) to accelerate team delivery and elevate developer productivity.

## TECHNICAL LEADERSHIP & IMPACT

---

- **Platform Scale:** 100M+ requests/day, 200+ microservices, 50+ development teams enabled, 99.99% availability with 12-minute MTTR
- **Transformation:** Led 5 DevOps transformations across fintech, eCommerce, data-intensive, and healthcare SaaS environments
- **Cross-Team Leadership:** Owned multi-tenancy architectural RFC (recommending schema-per-tenant for biopharma compliance); drove Developer Enablement documentation standards
- **Mentorship:** Mentored 20+ engineers across platform, SRE, and cloud disciplines; established runbooks, golden paths, and self-service tooling patterns
- **FinOps & Efficiency:** \$500K+ annual savings via Reserved Instance strategy, cluster right-sizing, observability consolidation, and IaC-driven automation
- **Developer Experience:** 60% support-ticket reduction through self-service portals, IDP adoption (Backstage), and golden paths

## PROFESSIONAL EXPERIENCE

---

### myTomorrows, Amsterdam, Netherlands

Feb 2026 - Present

#### Senior DevOps Engineer

- Driving platform modernization across AWS EKS infrastructure for a regulated healthcare SaaS, including observability migration to the LGTM stack and multi-tenancy architecture review for biopharma compliance
- Progressing a cross-team Developer Enablement initiative - internal documentation standards, onboarding runbooks, and self-service patterns to elevate engineering-wide technical capability
- Standardization of the Google Cloud Platform with Terraform for data pipelines, BigQuery and AI/ML workloads

### Datenna B.V., Eindhoven, Netherlands

Jan 2025 - Jan 2026

#### Senior DevOps Engineer

- Automated provisioning of Azure-native resources (AKS, VMs, Storage, Databricks) using Pulumi and Crossplane across multiple environments, improving deployment speed and consistency
- Implemented Policy-as-Code with Open Policy Agent (OPA) for governance across AKS clusters, enforcing security, cost, and compliance guardrails at scale
- Architected and optimized Azure platform scalability and reliability to support growing data-intensive and defence-intelligence workloads
- Deployed and managed Azure Databricks clusters, automating access controls and cost optimization practices to support data engineering teams
- Led incident response during on-call rotations; championed blameless post-mortems and developed automation tools to reduce manual toil and improve deployment reliability

### PVH Europe B.V., Amsterdam, Netherlands

Apr 2022 - Dec 2024

#### Senior DevOps Engineer / SRE

- Designed and executed AWS cloud infrastructure strategy for Tommy Hilfiger and Calvin Klein eCommerce platforms powering billions in revenue across EU markets, enhancing scalability and fault tolerance

- Orchestrated containerized microservices on AWS EKS with high-availability and autoscaling configurations for traffic-intensive retail events and global launches
- Led migration to Amazon OpenSearch, reducing observability costs by 25% while maintaining high data fidelity and query performance
- Automated infrastructure deployments using Terraform and Terragrunt, improving deployment efficiency by 30%; maintained an “Everything-as-Code” approach (IaC, Monitoring-as-Code, pipelines)
- Built and operated CI/CD pipelines with GitHub Actions, integrating security scanning and compliance checks throughout the software delivery lifecycle
- Collaborated with product and engineering teams to embed reliability and security best practices across the application lifecycle

## **BOC Group, Vienna, Austria**

Jul 2021 - Mar 2022

### *DevOps Engineer*

- Designed and deployed scalable AWS cloud infrastructure for enterprise applications, ensuring high availability and performance
- Managed Kubernetes (EKS) clusters and Helm releases, delivering reproducible builds and streamlined application deployments
- Implemented AWS cost optimization strategies, reducing operational expenses without compromising performance
- Developed and maintained CI/CD pipelines to automate testing and deployment, accelerating release cycles
- Participated in on-call rotations and incident response, diagnosing and resolving production issues efficiently

## **Kudi Inc., Abuja, Nigeria (Fintech / Payments)**

Aug 2020 - Feb 2021

### *DevOps Engineer*

- Designed and operated scalable infrastructure on Google Cloud Platform for a high-transaction-volume fintech platform, optimizing resource utilization for regulated financial services workloads
- Managed Kubernetes clusters on GKE, enabling seamless deployment, autoscaling, and high availability for microservices-based payment systems
- Maintained Terraform IaC repositories ensuring consistent, reproducible infrastructure across environments; contributed to DevSecOps practices aligned with financial services compliance requirements
- Implemented observability with Prometheus and Grafana, improving incident detection, MTTR, and system reliability for transaction-critical workloads
- Collaborated with development teams to integrate reliability and security practices into deployment pipelines for a regulated fintech environment

## **NubesCode Ltd., Abuja, Nigeria**

Jan 2019 - Jul 2020

### *DevOps Consultant*

- Designed and managed multi-cloud infrastructure on GCP (GKE) and AWS (EKS) for client engagements, enabling high availability and efficient resource utilization
- Implemented ELK Stack monitoring solutions, reducing incident resolution time and improving reliability across client environments
- Participated in on-call rotations and led incident response efforts, driving rapid issue resolution

## **Earlier Career - Infrastructure & SAP Technical Specialist**

2014 - 2018

- Built foundational technical expertise in enterprise systems and infrastructure management
- Led SAP implementation and migration projects at the Nigerian National Petroleum Corporation, developing project leadership, stakeholder management, and technical training skills

## **TECHNICAL EXPERTISE**

---

### **Cloud Platforms**

- **Google Cloud Platform:** GKE, Cloud Build, CloudSQL, IAM, Cloud Storage - data pipelines, BigQuery and AI/ML workloads, as well as FinTech payment workloads
- **AWS:** EKS, Lambda, RDS, OpenSearch, EventBridge, SNS/SQS, IAM, CloudWatch - eCommerce and healthcare SaaS
- **Azure:** AKS, Databricks, ARM, Storage, Entra ID - data-intensive enterprise workloads (Datenna)

## Kubernetes & Platform Engineering

- Multi-cluster management, Service Mesh (Istio), Operators, Helm, cert-manager
- Self-Service Portals, Internal Developer Platforms (Backstage), Service Catalogs, golden paths
- Policy-as-Code (Open Policy Agent), RBAC, Zero-Trust Architecture

## IaC, GitOps & CI/CD

- **IaC:** Terraform (HashiCorp Authoring & Operations Professional), Pulumi, Crossplane, Terragrunt, Ansible
- **GitOps:** ArgoCD, FluxCD, Codefresh (GitOps Fundamentals & Scale certified)
- **CI/CD:** GitHub Actions, Jenkins, GitLab CI, CircleCI - security scanning, compliance checks, release automation

## Reliability, Observability & SRE

- 99.99% uptime practice, SLO/SLI/Error Budgets, Chaos Engineering, Multi-Region HA and DR
- Datadog, Prometheus, Grafana, OpenSearch / ELK, OpenTelemetry
- Incident management, blameless post-mortems, on-call rotations

## Security, Compliance & DevSecOps

- OAuth 2.0, SAML, Secret Management (HashiCorp Vault, Infisical, External Secrets Operator)
- Container security, compliance automation, DevSecOps pipeline integration
- Regulatory alignment: GDPR, ISO-27001 context, fintech compliance exposure

## Languages & Scripting

- Python, Bash, Golang (automation, tooling, controllers)

## AI Ops & GenAI

- Active adoption of Claude Code, Cursor, and MCP-driven workflows for infrastructure automation and team productivity
- Public MLOps platform reference project: [github.com/judeoyovbaire/mlops-platform](https://github.com/judeoyovbaire/mlops-platform)
- Exploratory work on AWS Bedrock architectures, Modal, Kubeflow, KServe, vLLM for production ML workloads

## CERTIFICATIONS

---

- HashiCorp Certified: Terraform Associate
- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Application Developer (CKAD)
- Kubernetes & Cloud Native Associate (KCNA)
- Kubernetes & Cloud Native Security Associate (KCSA)
- AWS Certified Solutions Architect - Associate
- AWS Certified Cloud Practitioner
- Microsoft Certified: Azure Fundamentals
- Codefresh GitOps Certified Fundamentals
- Codefresh GitOps Certified Scale
- Aviatrix Certified Engineer - Multi-Cloud Network Associate

## EDUCATION

---

- M.Sc., Computer & Network Security - Middlesex University, London, United Kingdom
- B.Sc., Computer Science - Benson Idahosa University, Benin City, Nigeria
